To Find the Largest word in a String

```
#include <iostream>
using namespace std;

int main() {
   int n;

   cout << "Enter string size: ";
   cin >> n;
   cin.ignore();

   char str[n + 1];
   char word[n + 1], largest[n + 1];

   int i = 0, j = 0, max = 0;

   cout << "Enter string: ";
   cin.getline(str, n + 1);

   while (true) {
      if (str[i] != ' ' && str[i] != '\0') {
         word[j] = str[i];
         j++;
      }
      else {
         word[j] = '\0';
```

```
            if (j > max) {
                max = j;

                for (int k = 0; k <= j; k++)
                    largest[k] = word[k];
            }

            j = 0;
        }

        if (str[i] == '\0')
            break;

        i++;
    }

    cout << "Largest word: " << largest;

    return 0;
}
```
