Largest Word in a String

```
#include <iostream>
using namespace std;

int main() {
   int n;

   cout << "Enter string size: ";
   cin >> n;
   cin.ignore();

   char str[200], largest[200];
   int i = 0, j = 0, max = 0, start = 0;

   cout << "Enter string: ";
   cin.getline(str, 200);

   while (true) {
      if (str[i] != ' ' && str[i] != '\0') {
         j++;
      }
      else {
         if (j > max) {
            max = j;
```

```
            for (int k = 0; k < j; k++) {
                largest[k] = str[start + k];
            }

            largest[j] = '\0';
        }

        j = 0;
        start = i + 1;
    }

    if (str[i] == '\0')
        break;

    i++;
  }

  cout << "Largest word: " << largest;

  return 0;
}
```
